

Product Information

PC Requirements:

An available PCIe slot on the PC motherboard (PCI version coming soon!)

2 SATA Hard Drives

Operating System Support:

Supports any PC Operating System (OS)

Drive Interfaces:

2xSATA-II 3.0Gbps SATA port

Performance Specs:

SATA-II up to 3Gb/s

Weight:

< 1 lbs.

Box Contents:

iM-Boot *Duo* PCIe Card
External Switch
Installation & Users Manual
Evaluation Drive Mirroring Software

The iM-Boot *Duo*

Now you can have two computers in the same box with complete security between them.

Safely Separate Drives for Work or Play

The iM-Boot *Duo* is a hard drive selector that enables you to boot from two safely separate hard drives within the same desktop computer. While current software-based solutions are complicated and only offer an artificial barrier, the iM-Boot *Duo* physically isolates and protects each drive from the spread of viruses or full-data loss from crashes. By creating multiple and safely separate personalities in a single desktop, the iM-Boot *Duo* gives you flexibility, performance and security while saving you money and space.

Easy to Install, Easy to Use

The iM-Boot *Duo* fits into any available PCIe slot and sits between the motherboard and two SATA hard drives. An external switch selects the active drive and the other drive is safely removed from the system and rendered invisible to the computer. iM-Boot's intelligent design makes moving between drives as easy as the flick of a switch and a simple boot or re-boot. No powering down is necessary.

The iM-Boot interface is simple, secure and intelligent. The switch is only activated on system startup or reset, thereby eliminating the potential error of selecting a different drive while the current one is in use. Coupled with boot drive password protection, iM-Boot keeps your files safe.

The iM-Boot *Duo* is Perfect for:

Parents - Protect your kids online and keep your system untouchable without buying a whole new machine. Parental controls go on their drive, not yours.

Small/Home Office

Professionals - Keep your personal and business usage safe and physically separate on the same desktop.

Gamers - Give your gaming a drive that's streamlined for speed and run your favorite operating system, web browser and virus protection software on a separate drive.

Test Engineers - Create multiple operating system environments in which to

validate your software without Virtual Machines.

Retailers and Resellers

iM-Products provide an excellent business opportunity for PC retailers and resellers. The iM-Boot *Duo* can be configured in an initial system with two SATA drives or can be included as a value-added component during customer system servicing. Explore revenue opportunities and a very competitive reseller product margin with iM-Products.
